The graph displays the current A in l/s over a 100-second period. The y-axis is labeled A l/s and ranges from 5 to 7.2. The x-axis represents time in seconds, ranging from 0 to 100. The blue line shows a series of peaks and troughs, indicating fluctuations in current. A vertical black line is drawn at approximately 50 seconds.

The graph displays the current A in l/s over a 100-second period. The y-axis is labeled A l/s and ranges from 5 to 7.2. The x-axis represents time from 0 to 100 seconds. The current starts at approximately 6.8 l/s , drops to a minimum of about 5.6 l/s at 25 seconds, and then rises to a peak of about 7.2 l/s at 55 seconds. After this peak, the current drops to a minimum of about 5.9 l/s at 75 seconds and then rises to a peak of about 6.5 l/s at 95 seconds. A vertical line is drawn at approximately 50 seconds.

The graph displays the current I in Amperes (A) over a 12-second interval. The y-axis is labeled 'A I/s' and ranges from 5 to 7.2. The x-axis represents time in seconds, with a vertical line at 10s. The current starts at 6.8A, drops to 6.25A, then fluctuates between 6.2A and 6.9A. At 10s, it drops to 6.2A, then to a minimum of 5.6A at 11s, before rising back to 6.2A and fluctuating between 5.9A and 6.2A until 12s.

The graph displays a signal that starts at a value of approximately 6.9 at x=0. It exhibits several sharp peaks and troughs. The most prominent peak occurs at x=100, reaching a value of approximately 7.2. The most prominent trough occurs at x=200, reaching a value of approximately 5.6. The signal then rises to a value of approximately 6.2 at x=300.

The graph displays a blue line on a grid. The y-axis is labeled from 5 to 6.8 in increments of 0.1. The x-axis is marked by two vertical black lines. The line starts at approximately 6.55, drops to 6.25, rises to 6.55, then drops to 6.25. It then fluctuates between 6.2 and 6.55, reaching a peak of 6.8. After a sharp drop to 6.2, it fluctuates between 6.2 and 6.55, then drops to 6.2, rises to 6.55, and finally drops to 6.2.

[illegible]

The graph displays a signal that starts at a value of 6.5. It drops to 6.2, then to 5.9, and reaches a minimum of 5.6. Following this, it rises to 6.2, peaks at 6.5, and drops to 6.2. After the vertical line, it drops to 5.9, rises to 6.2, and then fluctuates between 5.9 and 6.2.

The graph displays a signal on a grid. The vertical axis (y-axis) is labeled from 5 to 6.2 in increments of 0.1. The horizontal axis (x-axis) is unlabeled but has a grid of 20 major divisions. The signal starts at 6.2, drops to 5.9, then to a minimum of 5.6, and then rises back to 6.2. It then fluctuates between 5.9 and 6.2 for the remainder of the plot.

The graph shows a blue line on a grid. The y-axis is labeled from 5 to 6.1 in increments of 0.1. The x-axis is labeled from 1 to 100 in increments of 1. A vertical line is drawn at x=50. The blue line starts at (1, 6.1), drops to (2, 5.9), then to (3, 5.6), and then fluctuates between 5.9 and 6.1. The line is divided into two sections by the vertical line at x=50.

The graph shows a function $f(x)$ plotted on a coordinate system with a grid. The y-axis is labeled from 5 to 6 in increments of 0.1. The x-axis has a vertical line at $x=10$. The function is defined as follows:

- For $x < 10$, the function oscillates between 5.9 and 6.0. It starts at 6.0 for $x < 8$, drops to 5.9 at $x=8$, reaches a minimum of approximately 5.6 at $x=8.5$, and then oscillates between 5.9 and 6.0 for $8.5 < x < 10$.
- For $x > 10$, the function is constant at 6.0.

The graph shows a function defined on a coordinate plane with a grid. The y-axis is labeled from 5 to 5.9 in increments of 0.1. The x-axis has a vertical line at $x=0$. The function is defined as follows:

- For $x < 0$, the function oscillates between $y=5.9$ and $y=6.0$. It starts at $(-10, 6.0)$, drops to $(-9.5, 5.9)$, rises to $(-9, 6.0)$, drops to $(-8.5, 5.9)$, rises to $(-8, 6.0)$, drops to $(-7.5, 5.9)$, rises to $(-7, 6.0)$, drops to $(-6.5, 5.9)$, rises to $(-6, 6.0)$, drops to $(-5.5, 5.9)$, rises to $(-5, 6.0)$, drops to $(-4.5, 5.9)$, rises to $(-4, 6.0)$, drops to $(-3.5, 5.9)$, rises to $(-3, 6.0)$, drops to $(-2.5, 5.9)$, rises to $(-2, 6.0)$, drops to $(-1.5, 5.9)$, rises to $(-1, 6.0)$, drops to $(-0.5, 5.9)$, and ends at $(0, 6.0)$.
- For $x > 0$, the function is zero, represented by a line along the x-axis.

A blank sheet of graph paper with a grid pattern. The vertical axis is labeled from 5 to 5.8 in increments of 0.1. A blue curve starts at approximately (0, 5.6) and rises steeply towards the top right corner.

A blank coordinate grid with a vertical axis labeled 5, 5.1, 5.2, 5.3, 5.4, 5.5, 5.6, 5.7. The grid is divided into two sections by a vertical line. The left section has a light gray background and the right section has a light blue background. The grid lines are cyan.
